1. SYMMETRY AND REFLECTION

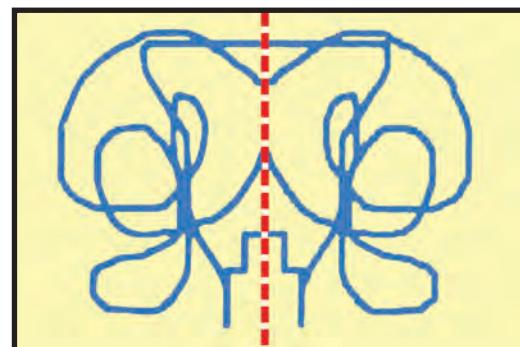

Reflections through Ink plots

- ★ Take a rectangular sheet of paper and fold it into half.
- ★ Soak a thread with ink and place it inside the folded paper and pull the thread out.

★ Open the paper. What do you see? Some designs are formed on either side of the folding. Are they same?

Yes, but opposite in face, that is they appear identical but in reverse.
This design is in reflection.

In the same way do some more reflection designs and stick them in your notebook.

Stick the Designs

Fathima, I will do another pattern. Will you help me?

Yes, Kamala, let us have fun.

B | B
5 | C

Take a white sheet and write the alphabet 'B' in bold letter using crayons. Fold and scratch it gently till the impression is formed on the other side. Open it and see.

Ok, Kamala, I will try with number 5.

Very interesting Kamala, shall we create many pictures like this and stick in our notebook and show to our teacher?

Reflections through Mirror

Saranya : Teacher, is there any special name for these pictures?

Teacher : Yes, these are called **Mirror images**. These pictures are in **mirror reflections**.

Fathima : Teacher, I see a line between the two sides which divides the pictures equally on either side.

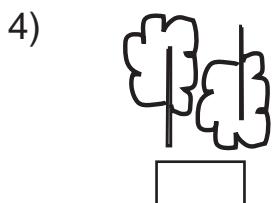

Teacher : Oh, that line is called "**Mirror line symmetry**".

Tick the mirror images.

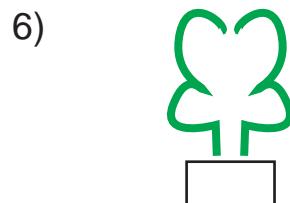

1) **R R**

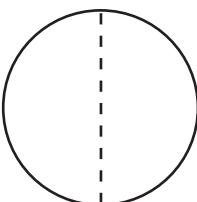

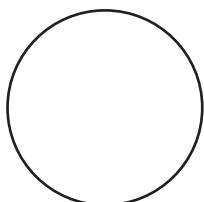

3) **C C**

5) **4 4**

Line of symmetry

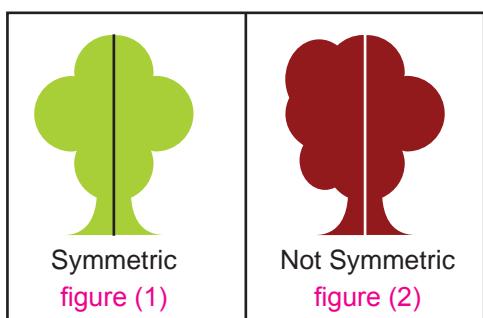

Cut a circular paper, fold it equally. A line divides it into two equal halves. This line is called '**line of symmetry**', which means it is exactly the same on both sides of the line.

Practice

Cut a rectangular paper, fold it equally. Draw a line on the folding and stick the paper in your notebook.

Check for symmetry.

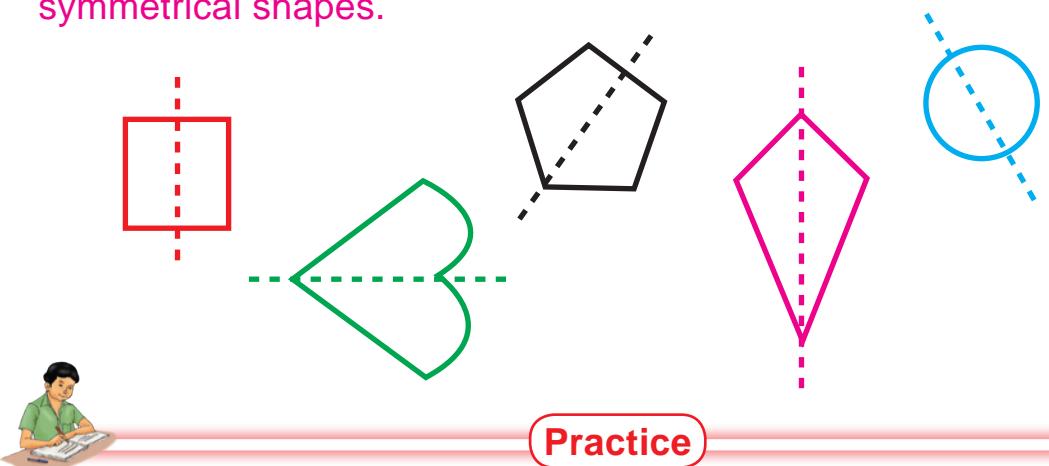

* Trace two given figures in a small paper separately, fold it and check for the line of symmetry.

* In **figure(1)** you get a line of symmetry so that the two parts coincide exactly, **figure(1)** is symmetrical. In **figure(2)**, two parts do not coincide, so **figure (2)** is not symmetrical.

Symmetry in geometrical shapes

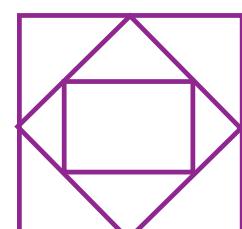

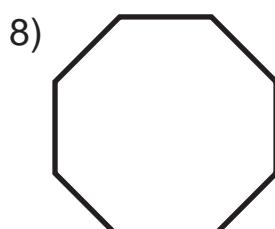

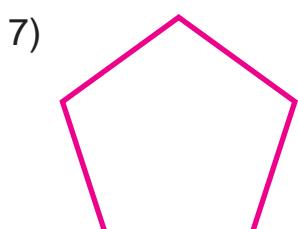

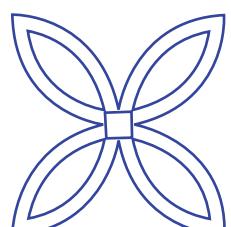

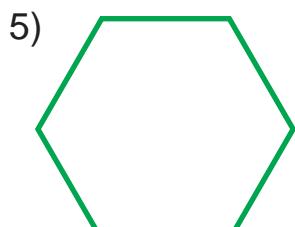

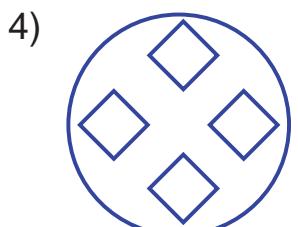

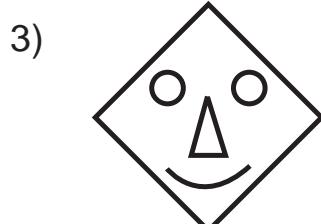

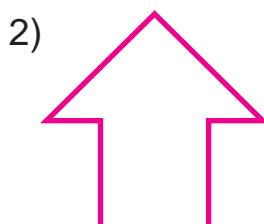

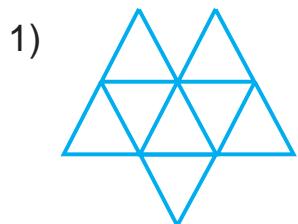

Observe the following shapes:

A line of symmetry divides a figure into mirror-images. The dotted lines below are the line of symmetry. It divides the figure into two equal parts. Both the sides are symmetrical. These are called **symmetrical shapes**.

Practice

Draw the line of symmetry for the following figures.

Draw the line of symmetry and circle the letters which do not have the line of symmetry.

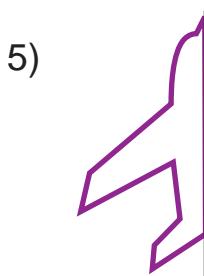

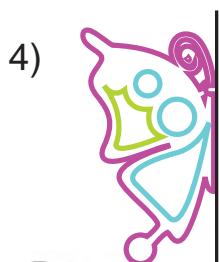

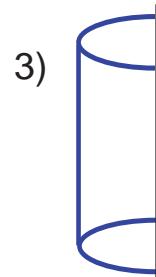

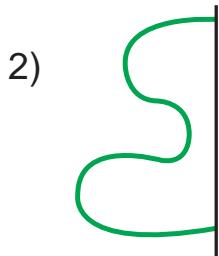

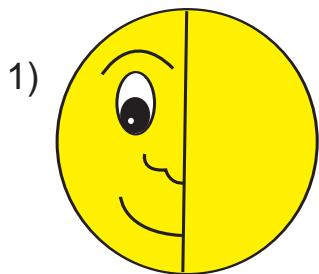

1) A B F G H

2) K M N O P

3) S U V Z L

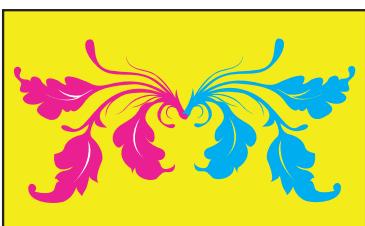

4) J Y R C D

Draw the other half to make the given pictures symmetrical.

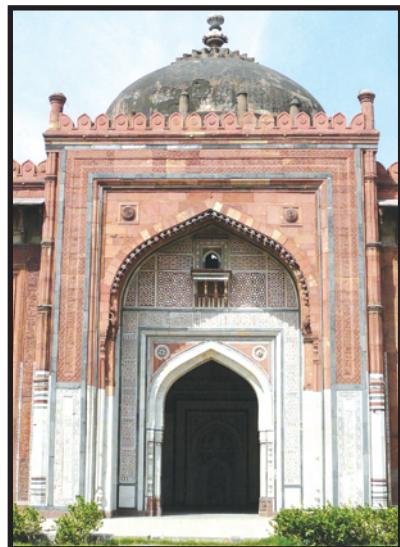

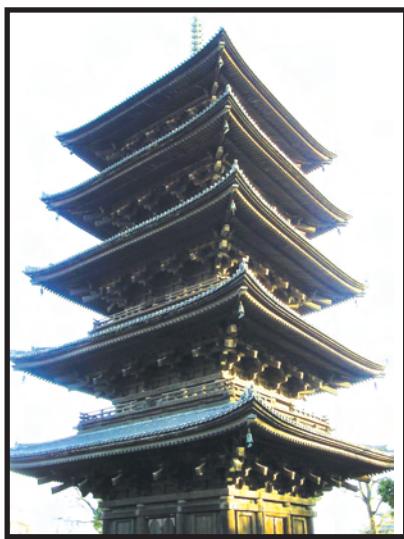

Project

- ★ Nowadays, children like to decorate their hands with tattoos.
- ★ Many of the designs of tattoos are symmetrical.
- ★ Some designs are given below.
- ★ Stick some designs of your choice in your notebook.

Visualize the symmetrical figures

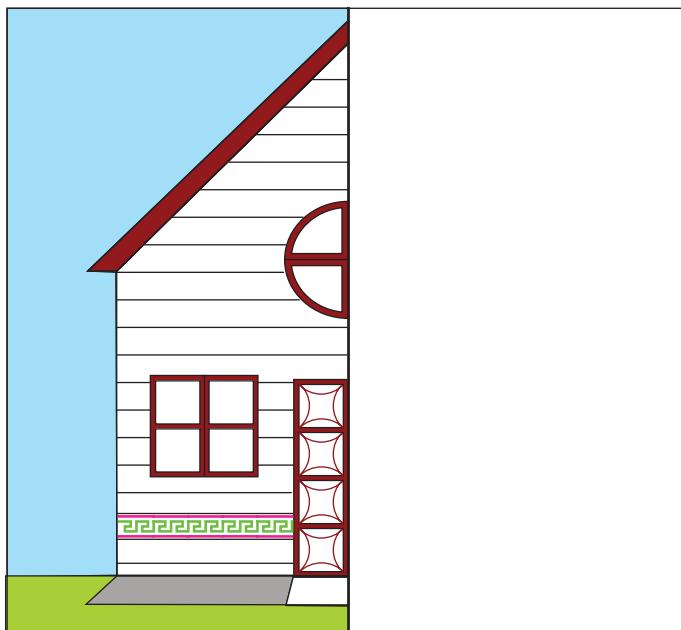

Observe the pictures. They are very beautiful. Symmetry is maintained on the left and right side of the buildings.

Practice

1) Complete the other side of the house and colour it.

2) Complete the other side of the clown and colour it.

Revision

The coloured part represents $\frac{1}{3}$.

Whole is divided into 4 equal parts. One part is coloured.
The coloured part represents $\frac{1}{4}$.

Whole is divided into 5 equal parts. One part is coloured.
The coloured part represents $\frac{1}{5}$.

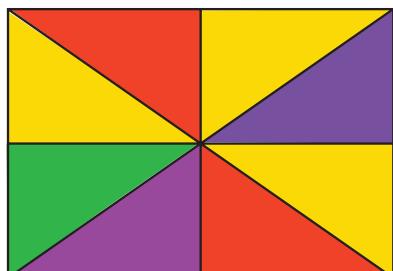

$\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5}$ are called fractional numbers.

The same portion of each rectangle is coloured.

Green rectangle refers to $\frac{1}{2}$.

Pink rectangle refers to $\frac{2}{4}$.

Orange rectangle refers to $\frac{3}{6}$.

Violet rectangle refers to $\frac{4}{8}$.

All the coloured rectangles are same in size.

$$\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8}$$

$\frac{1}{2}, \frac{2}{4}, \frac{3}{6}, \frac{4}{8} \dots$ are equivalent fractions.

Birthday party

Akash celebrated his birthday by giving cakes to his friends. Out of 8 equal pieces of cake, he gave 3 pieces to Anandhi and 2 pieces to Ram.

$$\text{Anandhi's parts} = \text{Three eighth} = \frac{3}{8}$$

$$\text{Ram's parts} = \text{Two eighth} = \frac{2}{8}$$

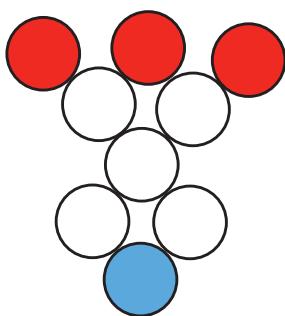

$$\begin{aligned}\text{Total parts given to his friends} &= \frac{3}{8} + \frac{2}{8} \\ &= \frac{3+2}{8}\end{aligned}$$

$$\text{Total parts given to his friends} = \frac{5}{8}$$

$$\frac{3}{8} + \frac{2}{8} = \frac{5}{8}$$

For adding two fractions with the same denominators, add the numerators and keep the same denominator.

Add the fractions

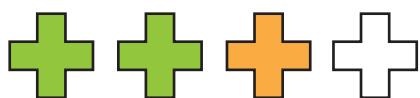

$$\frac{3}{9} + \frac{1}{9} = \frac{3+1}{9} = \frac{4}{9}$$

Pizza Corner

Sri Ram took $\frac{4}{6}$ parts of pizza. He gave $\frac{3}{6}$ parts to his sister Meenu. How many parts of pizza were left with him?

$$\text{Parts of pizza taken by Sri Ram} = \frac{4}{6}$$

$$\text{Parts of pizza given to Meenu} = \frac{3}{6}$$

$$\begin{aligned}\text{Parts of pizza left with him} &= \frac{4}{6} - \frac{3}{6} \\ &= \frac{4-3}{6}\end{aligned}$$

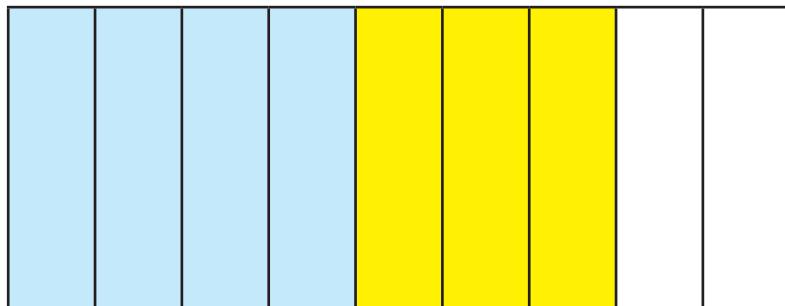

$$= \frac{1}{6}$$

$$\text{Fractional number of pizza left with him} = \frac{1}{6}$$

$$\frac{4}{6} - \frac{3}{6} = \frac{1}{6}$$

While subtracting fractions with the same denominators, subtract the numerators and keep the same denominator.

Subtract the fractions : $\frac{7}{9} - \frac{4}{9}$

4. HANDLING MONEY

Two friends are talking about the change of rupees.

Do you have change
for 1000 rupees ?

Shall I give two 500 rupee notes?

No, I want in 100 rupee notes?

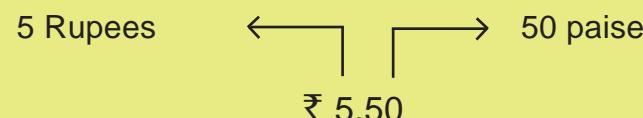

I am not having ten 100 rupee notes.
Only I have five 100 rupee notes.

Okay, you give one 500 rupee note
and five 100 rupee notes.

Rupees can be expressed as ₹
and paise can be expressed as p.

₹5.50 can be written in words as Rupees five and fifty paise or Five rupees and fifty paise.

Play with coins

Can you make ₹1 using 50 p coins ?

Look here !

- ★ ₹ 1 using 50 p coins

- ★ ₹ 2 using ₹ 1 coins

Now try !

- ★ Make ₹ 5 using 1 rupee coins.
- ★ Make ₹ 10 using 2 rupee coins.
- ★ Make ₹ 50 using 5 rupee coins.

Know it.

$$50 \text{ p} + 50 \text{ p} = 100 \text{ p}$$

- 3) Vinisha bought chapathi for ₹ 25.50 and a fruit juice for ₹ 15.50. How much should she pay ?

Subtraction with Conversion

Step 1:

Subtract paise

75 p cannot be subtracted from 20 p.

So, take ₹ 1 from ₹ 52.

Now ₹ 1 = 100 p

$$100p + 20p = 120p.$$

$$120p - 75p = 45p.$$

$$\begin{array}{r} \text{₹ } 52 . 20 \\ - \text{₹ } 38 . 75 \\ \hline \text{₹ } 13 . 45 \end{array}$$
